Expanded Insurance Product Requirements Pack

Separate sample specifications for P&C and Life Insurance

Scope and assumptions

The original baseline is P&C Personal Auto Insurance (10 requirements and 47 test cases). This pack adds Homeowners/Property, Commercial Auto, Term Life, Whole Life and common Life Insurance requirements. A standard configured test environment is assumed; amounts and rules are illustrative.

P&C — Homeowners / Property

HOME-REQ-01 — Capture property and applicant details

Capture applicant, property address, occupancy, year built, roof year, construction type and effective date; validate mandatory fields and configured year ranges.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

HOME-REQ-02 — Validate property eligibility

Apply configured supported-state, occupancy, property-age and protection-class rules; refer risks that require manual review.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

HOME-REQ-03 — Select dwelling coverage and deductible

Support configured dwelling, other structures, personal property, loss of use, liability and medical payments limits; validate deductibles against configured options.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

HOME-REQ-04 — Calculate property premium and discounts

Use the rating version effective on the requested start date and configured territory, construction, protection, coverage and deductible factors; show discounts, taxes and fees separately.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

HOME-REQ-05 — Bind policy and register property loss

Permit binding only for a valid quote with terms accepted and payment confirmed; accept loss notice only when policy is in force on loss date.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

P&C — Commercial Auto

CA-REQ-01 — Capture business and fleet details

Capture legal business name, business identifier, garaging state, VIN, model year, vehicle type, stated value, mileage band and vehicle use.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

CA-REQ-02 — Validate commercial risk eligibility

Apply configured business-class, vehicle-class, garaging-state and fleet-size rules; distinguish referral from hard decline.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

CA-REQ-03 — Select commercial auto coverages

Support configured liability limits, comprehensive, collision and hired/non-owned auto options; validate deductible applicability.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

CA-REQ-04 — Rate fleet and apply credits

Use effective rating version and configured business, vehicle, territory, mileage, driver and coverage factors; itemise fleet credits/surcharges.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

CA-REQ-05 — Issue policy and endorse a vehicle

Create a unique policy on binding; vehicle additions/removals create auditable transactions and prorated premium changes.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

Life Insurance — Term Life

TERM-REQ-01 — Capture term-life application

Capture insured identity, DOB, residence state, smoker status, face amount, term length, beneficiary allocations and requested effective date.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

TERM-REQ-02 — Apply life underwriting eligibility

Evaluate configured age, face amount, residency and underwriting questions; refer cases outside automatic-decision limits.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

TERM-REQ-03 — Calculate term premium

Use approved rate table effective on policy start date and configured age, smoker class, face amount, term and underwriting class.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

TERM-REQ-04 — Validate beneficiaries

Require valid beneficiary details and allocations totalling exactly 100%; prevent incomplete allocation from proceeding.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

TERM-REQ-05 — Issue policy and handle free-look

Issue only after approval, acceptance and initial-payment confirmation; apply configured free-look cancellation and refund rules.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

Life Insurance — Whole Life

WL-REQ-01 — Capture whole-life funding choices

Capture insured details, face amount, premium mode, payment duration, beneficiaries and configured paid-up/additional-benefit options.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

WL-REQ-02 — Validate whole-life issue eligibility

Apply configured issue-age, residence, face-amount and underwriting-class rules.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

WL-REQ-03 — Calculate premium and guaranteed values

Calculate premium and guaranteed values using product version, issue age, face amount, payment duration and premium mode; label non-guaranteed illustrations separately.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

WL-REQ-04 — Validate cash value and policy loans

Display cash value from configured policy-year schedule; enforce loan-available limit and eligible policy status.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

WL-REQ-05 — Issue policy and collect premium

Require completed underwriting, accepted terms and initial-payment confirmation; record failed collection accurately.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

Life Insurance — Common Application, Underwriting and Servicing

LIFE-REQ-01 — Create and track application

Create unique application reference with insured identity, product, status, timestamp and audit history.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

LIFE-REQ-02 — Validate disclosures and evidence

Require mandatory disclosures and configured underwriting evidence before underwriting approval.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

LIFE-REQ-03 — Manage underwriting decisions

Support configured approve, decline and refer decisions; referral must block issue until review is resolved.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

LIFE-REQ-04 — Generate documents and audit changes

Policy documents must match issued policy values; material servicing changes must retain actor, timestamp and changed fields.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.

LIFE-REQ-05 — Change beneficiaries and register claim notice

Validate beneficiary allocations; death claim notification must reference an existing policy and capture event/reporter details without implying approval.

Acceptance criteria: required inputs and configured rules are validated; invalid/ineligible requests are blocked or referred with a reason/status; successful transactions preserve values and create expected references/status/audit data.
